# 1 Objective

This lab is about trying to find the Fourier Series of the following Square Wave.

Figure 1

## 2 Equations

The following equations can be used to define the wave:

$$\begin{aligned}x(t) &= \frac{1}{2}a_0 + \sum_{n=1}^{\infty} a_n \cos(k\omega_0 t) \\a_k &= \frac{2}{T} \int_0^T x(t) \cos(k\omega_0 t) dt \\b_k &= \frac{2}{T} \int_0^T x(t) \sin(k\omega_0 t) dt \\ \omega_0 &= \frac{2\pi}{T}\end{aligned}$$

Since this is an odd function,  $a_0 = a_k = 0$ .

For  $b_k$ :

$$\begin{aligned}b_k &= \frac{2}{k\pi}(-\cos(k\pi) + 1) \\&\text{if } k \text{ is even, } b_k = 0 \\&\text{if } k \text{ is odd, } b_k = \frac{4}{k\pi}\end{aligned}$$

Therefore:  $x(t) = \sum_{k=1}^{\infty} \frac{4}{k\pi} \sin(k\omega_0 t)$  for when  $k$  is even.

Though, for the code, the original  $b_k$  function will be used in  $x_t$  to simplify the code (plus the code kept breaking when I tried to do it that way...).

### 3 Code

The following is the code used in the lab. *Lab Code*

```
import numpy as np
import matplotlib.pyplot as plt

#-----PT 1-----#
def b_k(n):
    b = (2 / (n * np.pi)) * (1 - np.cos((n) * np.pi))
    return b

def W(period):
    return ((2*np.pi)/period)

def xFourier(t, period, n):
    x_t = 0 #initialization
    for i in np.arange(1, n+1):
        x_t += (b_k(i))*(np.sin(i * W(period) * t))
    return x_t

#Since this is an odd function, a0 = an = 0

#step size
steps = 1e-1

# t for part 1
start = 0
stop = 20
# Define a range of t. Start at 0 and go to 20 (+a step)
t = np.arange(start, stop + steps, steps)

#Make arrays to plot against t
x_1 = xFourier(t, 8, 1)
x_3 = xFourier(t, 8, 3)
x_15 = xFourier(t, 8, 15)
x_50 = xFourier(t, 8, 50)
x_150 = xFourier(t, 8, 150)
x_1500 = xFourier(t, 8, 1500)

#plot stuff
plt.figure(figsize=(10, 12))
#space out subplots
plt.subplots_adjust(left=0.1, bottom=0.1, right=0.9,
```

```
top=1.0,  wspace=0.4,  hspace=0.4)
```

```
#PLOT EVERYTHING!!!!
```

```
plt.subplot(6, 1, 1)
plt.plot(t, x_1)
plt.title(" Estimation when N=1")
plt.ylabel("x(t) Output")
plt.grid()
```

```
plt.subplot(6, 1, 2)
plt.plot(t, x_3)
plt.title(" Estimation when N=3")
plt.ylabel("x(t) Output")
plt.grid()
```

```
plt.subplot(6, 1, 3)
plt.plot(t, x_15)
plt.title(" Estimation when N=15")
plt.ylabel("x(t) Output")
plt.grid()
```

```
plt.subplot(6, 1, 4)
plt.plot(t, x_50)
plt.title(" Estimation when N=50")
plt.ylabel("x(t) Output")
plt.grid()
```

```
plt.subplot(6, 1, 5)
plt.plot(t, x_150)
plt.title(" Estimation when N=150")
plt.ylabel("x(t) Output")
plt.grid()
```

```
plt.subplot(6, 1, 6)
plt.plot(t, x_1500)
plt.title(" Estimation when N=1500")
plt.ylabel("x(t) Output")
plt.grid()
```

```
plt.show()
```

```
print("a0 and an values for a are zero. This is because the wave is odd and")
print("")
print("b1=", b_k(1))
print("")
```

```
print ("b2_=" , b_k(2))  
print ("")  
print ("b3_=" , b_k(3))
```

## 4 Results

The following graphs are the Fourier Series Approximation of the square wave seen in *Figure 1*, iterated at  $N = 1, 3, 15, 50, 150, 1500$ .

*Figure 2*

## 5 Questions

### 5.1 Question 1

Is  $x(t)$  an even or an odd function? Explain why.

$x(t)$  is an odd function because  $x(t) = -x(-t)$

### 5.2 Question 2

Based on your results from Task 1, what do you expect the values of  $a_2, a_3, \dots, a_n$  to be? Why?

I expect all those value to be zero because it's an odd function!

### 5.3 Question 3

How does the approximation of the square wave change as the value of  $N$  increases? In what way does the Fourier series struggle to approximate the square wave?

The approximation gets better as  $N$  increases. Fourier struggles to approximate the square wave because its lines are straight!

### 5.4 Question 4

What is occurring mathematically in the Fourier series summation as the value of  $N$  increases?

The Fourier Series is approaching a limit at some time value.

### 5.5 Question 5

Leave any feedback on the clarity of lab tasks, expectations, and deliverables.

It may be a good idea to, in the prelab anyway, throw out a hint, something like: "Hint: Look up the difference between odd and even functions when approximating a graph." I personally remembered there was a "cheat" to make life easier, but not everyone does.
